Seattle	55 / (34)	--	V. Weak (2)

Radius shaken before message release: Not available

Footnotes:

- * Time -- Time from message release to predicted S-wave arrival at the location. "--" for weak or imperceptible shaking.
- ** MMI -- Modified Mercalli Intensity - a numeric shaking severity scale
- *** For earthquakes deeper than ~15 km, the ShakeAlert Message may be available before peak shaking reaches the surface.

Figure 1. ShakeAlert initial earthquake location (black dot). Star is ANSS earthquake epicenter. Polygon approximates the outer range for felt ground motion. If shown, red circle is front of peak shaking when the Message was released***. Shaking takes 10 s to expand from circle to circle.

Figure 2. Polygons show shaking intensity contours for the peak magnitude estimate. Shaking of MMI 3 or less is often not felt. Star shows the ANSS earthquake epicenter.
