## Radius shaken before message release: 15 km (9 mi)

### Footnotes:

\* Time -- Time from message release to predicted S-wave arrival at the location. "--" for weak or imperceptible shaking.  
 \*\* MMI -- Modified Mercalli Intensity - a numeric shaking severity scale  
 \*\*\* For earthquakes deeper than ~15 km, the ShakeAlert Message may be available before peak shaking reaches the surface.

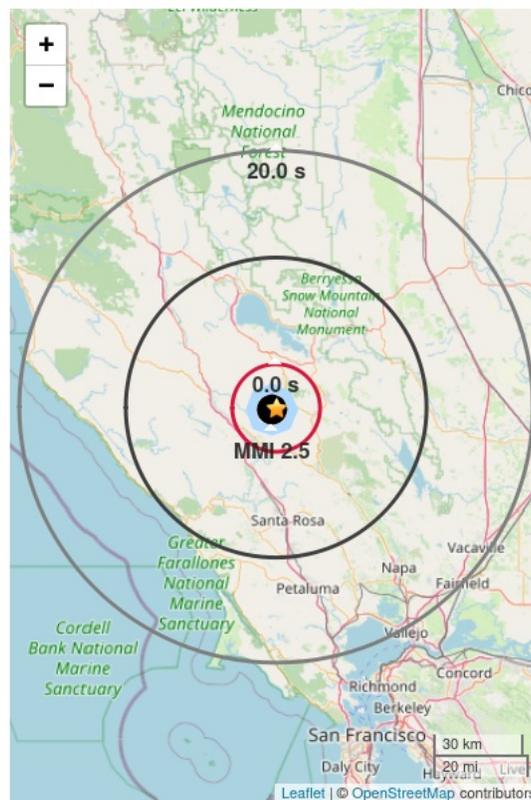

Figure 1. Initial earthquake locations from ShakeAlert (black dot) and ANSS (orange star). Polygon shows estimated area of felt ground shaking\*\*. Red circle (if shown) marks the position of the peak shaking wave front at the time the Alert Message was issued\*\*\*. Note, shaking takes 10 seconds to expand from circle to circle.

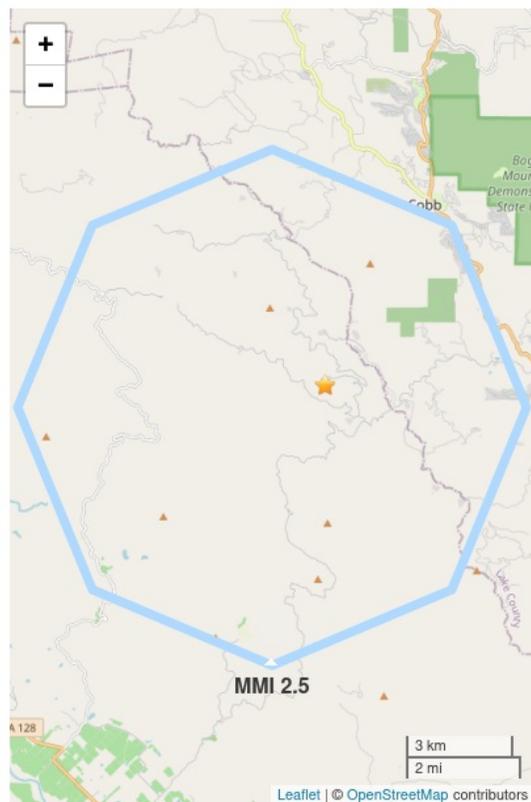

Figure 2. Polygons show the maximum estimated extent of ground shaking for different MMI\*\* ranges (color-coded and labeled). Shaking of MMI 3 or less is often not felt. Orange star shows the ANSS earthquake location.
